

RELEASE NOTES

24.1

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

April 2024

NEW FEATURES THIS RELEASE

NEW FEATURES

- Added a section in the User Profile screen to list a company administrator so users will know who to contact to request role assignments or perform other user management tasks.
- Changed the Bill From and Bill To fields on Contracts to not allow users to type invalid text in those fields. Users will now need to use a search function to find the valid information in a list.
- Improved the appearance of the Pole History/Attachment History tab when adding or updating a pole asset.
- A function that retrieved values for some drop-lists on conversations has been improved to be more efficient.
- The standard pole import and standard pole attachment import specifications have been updated to allow import of the standard fields used by most customers. Additional fields may be imported by setting up a customer-specific import specification.
- Upgraded the document service to ensure the application is using the latest components.

BUG FIXES

BUGS FIXED THIS RELEASE

- ✓ Updated email validation to prevent errors in the browser console and when entering email addresses.
- ✓ The bottom of the header page was cut off by the save button/bar when editing a contract, making it difficult to view and edit certain fields.
- ✓ A phone number field validation was not working properly when adding a phone number to a field.
- ✓ The opacity of the Hawaii HPZ map layer would freeze after adjusting zooming or panning in the map view.
- ✓ The facet for STATE was no longer appearing in the left panel of search results.
- ✓ When adding a note to an asset, the last modified date was not being shown as the correct date on the screen.
- ✓ Dates entered in a conversation field with a two-digit year were not properly saved to the database.
- ✓ Users with Basic licenses were inappropriately given access to Export to Excel from search results.
- ✓ An error occurred when users who did not have access to the "Attacher Name" data attempted to Export to Excel from the search results.
- ✓ Selecting values from a drop-down list sometimes resulted in blank entries appearing even though the list was configured.

BUG FIXES (CONT.)

BUGS FIXED THIS RELEASE

- ✓ Attempting to add a private document or photo to an asset and then cancelling the action would result in the selected user/company being listed the next time a private document or photo was added.
- ✓ The right side of a conversation was cut off in Firefox, eliminating the up/down scroll bar on certain tabs.
- ✓ A user with the necessary role was not able to see the Combine Documents button in the Documents tab of a conversation, pole, contract, or other asset.
- ✓ Dates in reports were sometimes incorrect when the user running the report was in a time zone other than Central Time Zone.
- ✓ The save button did not become visible after editing a date value in any of the Accounting reference data lists.
- ✓ When using the Add To External Calendar function from a conversation, the body of the appointment was inadvertently truncated in some calendar applications.
- ✓ Some users experienced an "Account Locked" error message immediately after changing their password in the User Profile screen.
- ✓ Some users received an error "Found an unbalanced bracket expression" when searching for poles in map view.

BUG FIXES (CONT.)

BUGS FIXED THIS RELEASE

- ✓ Required fields were not enforced in the standard pole import, potentially leading to issues with missing data values.
- ✓ The standard pole attachment import both updated an attachment record (if one existed) and added a new attachment record. The standard pole attachment import no longer allows updates until further investigation can be performed.
- ✓ The standard pole import was not updating existing poles as expected.
