

RELEASE NOTES

24.6

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

October 2024

NEW FEATURES

- **Handle Special Characters in Conversation Import/Updates via API:** The system now handles special characters in the title and description fields of conversations when processing data via the API.
- **Manage Pole Violations as Searchable Assets:** Pole Violations can now be managed and searched as assets in Alden One. When viewing an open Pole, a new Pole Violations tab is available to create new associated Pole Violations and view existing linked Pole Violations. When a Pole Violation asset is opened, users can add notes, documents, and photos. When a Pole and its associated Violation assets are added to a conversation, users can see the relationship between the two by selecting (checking) a Pole or Pole Violation.
- **Contract Status Field Added to All Contract Templates:** All contract templates now include a Contract Status field. This allows users to mark contracts as 'Inactive', 'Cancelled', etc., improving contract management.
- **New PLA Fields Added to Poles:** Three new fields have been added to the utility pole records: PLA Status, PLA Capacity, and PLA Completion Date. These fields help in tracking pole load analysis information. To request these fields be made visible on your poles, please work with your Alden One implementation specialist.

NEW FEATURES THIS RELEASE

NEW FEATURES (CONT.)

- **Search For Soft-Deleted Poles and View History:** Users can now view history records for soft-deleted poles. This ensures that important data is not lost and can be reviewed when needed. To request visibility of your deleted poles, please work with your Alden One implementation specialist.
- **Additions to Bulk Update Contract Line Items:** Users can now choose if they want to include Contract Line Items with non-recurring rate types during bulk updates of contract line items.

BUG FIXES

BUGS FIXED THIS RELEASE

- ✓ **Cell Structure Import Corrections:** Drawing# attribute values are no longer inadvertently truncated. The system now correctly marks Cell Structures as deleted when instructed to do so via data uploads. The Property Owner, Rated Capacity, and Electrical Service Address values are now correctly imported.
- ✓ **Cell Structure Attachment Import Corrections:** Numeric fields in Cell Structure Attachments now display a blank value rather than "0" when the import value is empty.
- ✓ **E-Payment Configuration Issue Resolved:** The Stripe payment integration now uses the configured entity type rather than the first entity in a conversation.
- ✓ **Standard GIS Pole Import Corrections:** Postal Code is no longer required.
