# RELEASE NOTES

26.1

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

February 2026

## NEW PERFORMANCE ENHANCEMENTS THIS RELEASE

# NEW PERFORMANCE ENHANCEMENTS

- **Endpoint Migration** – To help with performance, we migrated an endpoint for the method that populates some dropdowns to a new architecture.
- **System Performance** – We have improved some frequently used stored procedures to improve performance in the system.

# NEW FEATURES

## NEW FEATURES THIS RELEASE

- **Move Comment Column** – Previously, when viewing the grid of assets on a conversation, users were unable to move the **Comment** column to the left or right to make it visible without using the horizontal scroll bar.
- **New Help Desk** – Alden has switched from Fresh Desk to a new support platform called Zen Desk. We updated the Contact Support URL to point toward this new platform for your convenience.
- **Searching Errors** – When an error occurred while searching, some errors received were ambiguous and unclear. We have corrected this issue to provide specific error messages to allow users to better understand the problem when a search error is encountered.
- **Project Type to GIS** – When using the standard pole import for replace/move/inform, the Joint Use Pole Construction conversation now populates the **Project Type** field to GIS.

# BUG FIXES

## BUGS FIXED THIS RELEASE

- ✓ **Note Category Default** – We corrected an issue in which the Note Category kept defaulting to *General* when editing notes on assets.
- ✓ **Blank Drop-Downs** – We corrected a bug in the asset line editor in which sometimes dropdowns would load and then go blank. Now, values load and maintain their value.
