# RELEASE NOTES

26.2

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

March 2026

## NEW PERFORMANCE ENHANCEMENTS THIS RELEASE

- **Memory Usage** – Updated certain queries to help reduce memory usage

# NEW PERFORMANCE ENHANCEMENTS

# NEW FEATURES

## NEW FEATURES THIS RELEASE

- **Sort Geographically** – Updated the “Sort Geographically” function to use the Northwestern most asset as the starting point. Once the button is clicked, the assets will automatically sort by the “order” column in the UI grid.
- **Moving Columns** – Added the ability to move the “Order” and “Asset ID” columns in the conversation grid view. The columns will maintain their position after log in/log out.
- **SSO Landing Page** – The SSO successful connection landing page now redirects users to Alden One’s home page for a better user experience.
- **Split View** – Added the ability to view both the map and grid in a “split view” on the conversation asset page. Users can now see and interact with assets in a dual view, allowing them to see an asset’s location while also having the ability to read its properties and data in one page.
