

RELEASE NOTES

26.5

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

June 2026

NEW ENHANCEMENTS THIS RELEASE

NEW ENHANCEMENTS

- **Split-screen visualizer conversation map enhancements:**
 - The visualizer now includes a drag-bar that allows users to resize the view ports to their preferred sized.
 - It also includes a map “dimmer” that will make the map tiles darker to enable more contrast between the map and the points on the map.
 - Users can also now move the grid and map views to their desired side using a simple toggle in the toolbar.
- **Vault’s “Order” Field** - For ease of use, we have now moved the vault’s “order” field column further left on the conversation line editor so it can be easily referenced and modified.
- **Vault Attachment Properties** - When modifying the vault attachment properties via the conversation line editor, the parent vault number and order are now visible on the line editor for easier reference.
- **Vault “number”** - The Vault “number” is now an available label option when performing a vault search or when a vault is the primary asset on a conversation.
- **Set Order Geographically** - The toggle now prompts a confirmation dialog to prevent overwriting existing order values.

NEW FEATURES

NEW FEATURES THIS RELEASE

- **Connections to OKTA** - Alden ONE now supports connections to Okta for SSO.
- **Identity Server** - The Identity Server has been upgraded.
- **Sort Attachment** - Alden ONE now allows users to sort attachments by additional fields such as “Pole Order” or “Pole Work Type” when poles are hidden on the conversation grid view.
- **Utility Pole Attachments** - All now have an attribute called “Attached Sequence” to help track the order in which an attachment was added to its parent pole.

BUG FIXES

BUGS FIXED THIS RELEASE

- ✓ **Add Asset Button in Split View** - Fixed issue in which the *Add Asset* button was not appearing for assets on the split-view visualizer grid.
- ✓ **User Management List** - Fixed issue in which User Management in the Administration page was only showing the top 35 users unless the page was filtered or searched. Paging has now been added to this grid.
- ✓ **Conversation History Sorting** - In some rare cases, conversation history items were appearing out of order when auto events took place. This is now corrected.
