

RELEASE NOTES

26.6

Documenting **ENHANCEMENTS & BUG FIXES** for Alden One this Release

July 2026

NEW ENHANCEMENTS

NEW ENHANCEMENTS THIS RELEASE

- **Map Labels** - The selected label type on a conversation map (such as pole number, telco number, etc.) now persists to other opened conversations of that type.
- **Multi-Factor Authentication** - MFA will be implemented for all users. This will be a phased rollout. If you are prompted to set up MFA, follow the instructions on the screen.
- **Document Deletions** - Documents can be deleted now regardless of roles or which user/company uploaded them. All documents are soft deleted and sent to a system “Deleted” folder, from which they can be restored to a folder of the user’s choice. Adding duplicate files will prompt the user to either replace the file, or have a number appended to it.

NEW ENHANCEMENTS

NEW ENHANCEMENTS THIS RELEASE

- **Imports**
 - Streetlight import process has improved performance
 - Vault import process now includes **State** and **City** attributes
- **Payments on Conversations** - Payment receipt emails (if applicable) and transaction records in the Stripe dashboard now show the conversation numbers for which a payment was made

BUG FIXES

BUGS FIXED THIS RELEASE

- ✓ **Deselect all poles** – This option was still showing the *Select Items* menu, even after the selection has been cleared.
- ✓ **Holiday timer** – The Holiday timer was incorrectly setting the date when there is a holiday for a Friday and the following Monday.
- ✓ **User Profile Menu** - User Profile menu items were hidden when viewing a conversation in Split View.
- ✓ **Attacher Company** - In some situations, the Attacher Company was not properly set when a Utility Pole Attachment was imported into the system.
