Release Notes 18.2.2

Walkthrough of Improvements for this release of Alden One.

New Navigation on Conversations

① Now on a conversation, only the current area in the conversation is visible, in this case, Header. In previous versions of Alden One, each section was stacked on top of each other in one long page you could scroll through.

② You must now click on a tab to access that tab's information. **This was done to improve performance in the application and loading of conversations, and was a huge success in achieving that goal.** Conversations now load much faster and users should be able to get to their information much quicker than in previous versions.

Explaining the New "Edit Assets" Options

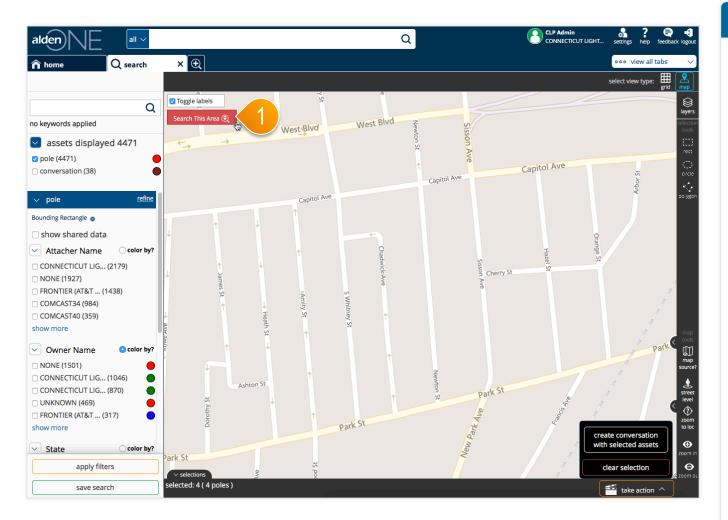

page walkthrough

① When you want the selected assets to have **different edits** for each asset, use the **Line Editor** here.

② When you want all selected assets to have the **same changes**, use **Form Editor** here.

Manually Searching When Moving a Map

① In previous versions of Alden One, a feature was available to "Search As I Move the Map." Unfortunately, **Google removed support for this functionality** in their maps, as it does cause a significant amount of resources to be called each time each user moves a map. Unfortunately, at this time, it appears as if industry is leaning this way, and since Alden One is returning large amounts of data with each move of the map, eliminating that feature has had the fortunate side effect of speeding up the Search. You may still use the map bounds to limit your search results: move the map and click "Search This Area" to only search within the map boundary.

Using Map Layers

page walkthrough

① Another feature added to this release is the addition of Map Layers. Click the Layers button here on the map to open the menu.

② Toggle available layers on or off using the checkboxes. Turning this on shows the zip code boundaries on the map.

③ Turn up or down the opacity of the layers using the slider bars.

User Stories Completed This Release

User Story
Add labels to boundary layers
Alden One - Print - Labels are not visible until zoomed in to certain level, but when zoomed in some items are out of bounds of map
(Asset Line Editor) - Implement performance improvements to memory and rendering in the rapid editor
Add a toggle on grid to Word Wrap vs Truncate
Put Zebra Striping on the grids
Redirect to Different Landing Page for Help Section for Users in Connecticut
Notify Legacy - Prevent Users from accessing Notify
As a user, I need to be able to rapidly edit assets that may have different values without having to open each asset separately in an edit mode
Add conversation logos for Ameren and GLPS
Alden One - Map - Allow user to display an asset facet in different colors based on the facets value (CONVERSATIONS)
Remove Counts from the Saved Searches on the homepage
Alden One - Create a layers service
Alden One - Create methods to add and remove from overlay options
Alden One - As a user, I want to be able to control the opacity of layers so that I can see multiple layers of data/bounds at a time.
Alden One - Integrate overlays from boundary service
Alden One (asset actions): Rename 'edit asset(s)' to 'line edit asset(s)' and rename 'bulk edit asset(s)' to 'form edit asset(s)'
Asset Tab - Set default number of items per page to 10 in grid view
Alden One - Map - Add IL zip code boundary
Alden One - Map - Allow user to display an asset facet in different colors based on the facets value (POLES)
Alden One - As a user, I want to see more (all) of a note on the Send Email dialog
As a user, I want to see the Rectangular asset-selection tool positioned first in the list of available asset-selection tools on the map
As a user, I want the companies listed in drop-downs to be limited to those that my company has a relationship with
As a user, I want the custodian field to auto-populate based on the selected owner when adding a 'push-pin' pole to a conversation
Alden One - Integrate boundary service for state overlay
As a user, I want to be able to apply filters and sort order to the data in the grid in the related conversations section on open conversation based on one or more columns
Alden One (search) - As a user, I want to be able to search for conversations having a custom attribute of A having a value x AND a custom attribute of B having a value of y
Rename Remind button to "Send Email" in open conversation
Alden One Conversation - Integrate Asset tab more closely with open conversation
Alden One (Conversation Page) - Redesign layout of conversation overview page
Add labels to boundary layers
Alden One - Print - Labels are not visible until zoomed in to certain level, but when zoomed in some items are out of bounds of map
(Asset Line Editor) - Implement performance improvements to memory and rendering in the rapid editor
Add a toggle on grid to Word Wrap vs Truncate
Put Zebra Striping on the grids
