

Release Notes for Release 20.1

Walkthrough of Improvements for this release of Alden One.

User Stories

Implemented a check-box control for conversations

Persisted the "show poles" selection so it will remain on the current setting whenever the user leaves and comes back to the conversation map

A message displays asking whether the user wants to save before leaving an unsaved "create contract" tab

Enabled field validations for email addresses and phone numbers to show user correct format expected

Removed the requirement to have an Expire Date on a contract

Restricted Currency fields to digits and one decimal point. Currency fields will display out to 4 decimal places.

Allowed basic column functions (sort, arrange columns) on Reference Data

Provide the ability to add a new pole asset via the map

Migrated documents and photos from the database into the cloud

Performance improvements when opening a conversation

Bugs

Prevented fields defined as 'Currency' from truncating trailing zeroes

Fixed layout issues in the Conversation Contacts screen when using Alden One on a mobile device

Made the clickable area for "Toggle Filter Pane" larger when using Alden One on a mobile device

Prevented columns containing a link from being hidden

Fixed the problem of private photos being invisible to users with whom the photo is shared

Corrected the column label when opening a conversation from pole's Conversation History tab

Enabled field validations on the length of a comment field

Corrected an issue where the Status/Assign dialog could open if a conversation was not successfully saved
