Add Joint Use Attachments to the Asset(s) on a Conversation

1. From a Conversation, click the **Poles** tab.
2. Select the poles that you need to add attachments to or select them all by clicking the **Select Items** button then **Select All Poles**. NOTE: You aren't required to perform these steps on all assets. The system will assume no construction needed for any assets with no **Work Type** selected.
3. With the asset(s) selected, from the **Take Action** menu, click **Add Joint Use Attachments to asset(s)**.
4. You can now fill in the form with the details of the attachments. Make sure to select the **Attachment Type** from the drop-down.
5. Once you've filled out the form with as much detail as possible, click **Save**.
   NOTE: It is up to you and your attachers to align on what information to include.
